PYTHON (Supervised,  
Unsupervised learning)

# **PROJECTS**

## **MERCY MEDICARE:** (self, December 2017-Completed)

- Updating traditional payment modes with faster and secure online payment modes.
- Faster and impromptu Identity Verification using Aadhar Card.
- Quick and convenient updates about patient's health via E-mails or SMS.
- Online appointment facilities for the patient.
- Secondary physicians are assigned to provide personalized health checkups and treatments for the patient at their homes.
- In case of any mishap, a robust system to prevent delay caused due to verification & F.I.R. system by designating available security staff to provide a 2-step verification to speed up the whole process and stand firm on the policy of '*patients-first*'.

## **BREASTCARE DIAGNOSTICS:** (self, June 2018-Completed)

- The base of this project is to predict disease in a human being, here is a machine that is built to do so.
- This machine will collect the main features that may cause the breast cancer, apply algorithms on them and successfully completed with an accuracy of 96%.

## **THE COOKBOOK HOUSE:** (self, January 2018- Completed)

- A platform where the one can be to able to book the cooks as per their necessity in their nearby areas.

## **An Online Donation Platform:**(self, February2018-March-2018)

- A new way to make donation with our platform where you can donate any type of stuff online and donations also, our boys will receive that stuff from you.

# **ACHIEVEMENTS**
